

## Cross-platform freedom: SEGGER's J-Flash now available for macOS & Linux

Monheim, Germany – April 9<sup>th</sup>, 2020

With the release of SEGGER J-Link software v6.70, all included tools are now available on every popular operating system: Windows, macOS and Linux.

While the J-Link software and included command line tools have been cross-platform for years, the applications with Graphical User Interfaces (GUIs) have only been available on Windows.

These have now been rewritten, one at a time to make the entire package cross-platform.

The concept and underlying platform has been proven for a long time in applications such as SEGGER Embedded Studio, SystemView and the Ozone debugger and performance analyzer.

With this release the popular J-Flash application, which provides an easy to use interface for production flash programming and automation, is finally available not only for Windows, but also for Linux and macOS.

“It has been a common request, especially from our customers in production environments, for J-Flash to support a non-Windows OS. Linux is often considered ideal in these applications, as it mitigates the risk of cyber threats and optimize production efficiency”, says Alex Grüner, CTO at SEGGER. “I am excited to say that J-Flash is now fully cross-platform enabled, and that the process of making all J-Link software available on all major OS platforms is now complete.”

For more on J-Link, and for a full list of the J-Link tools (i.e. Ozone, J-Link GDB Server, J-Link Remote Server, J-Flash, J-Flash SPI, J-Scope, RTT Viewer, SWO Viewer, etc.), please see:

###

## About SEGGER

SEGGER Microcontroller has over twenty-five years of experience in Embedded Computer Systems, producing state-of-the-art software libraries, and offering a full set of hardware tools (for development and production) and software tools.

SEGGER provides an RTOS plus a complete spectrum of software libraries including communication, security, data compression and storage, user interface software and more. Using SEGGER software libraries gives developers a head start, benefiting from decades of experience in the industry.

SEGGER's professional software libraries and tools for Embedded System development are designed for simple usage and are optimized for the requirements imposed by resource-constrained embedded systems. The company also supports the entire development process with affordable, high-quality, flexible, easy-to-use tools.

The company was founded by Rolf Segger in 1992, is privately held, and is growing steadily. SEGGER also has a U.S. office in the Boston area and branch operations in Silicon Valley and the UK, plus distributors on most continents, making SEGGER's full product range available worldwide.

## Why SEGGER?

In short, SEGGER has a full set of tools for embedded systems, offers support through the entire development process, and has decades of experience as the Embedded Experts.

In addition, SEGGER software is not covered by an open-source or required-attribution license and can be integrated in any commercial or proprietary product, without the obligation to disclose the combined source.

Finally, SEGGER offers stability in an often volatile industry making SEGGER a very reliable partner for long-term relationships.
